

AmosConnect Online

Compression, efficient use of satellite time, full duplex transmission, retransmit from point of failure. These are all the traditional ways for email systems to reduce communication costs and of course, AmosConnect is well known as being top of class in all of them.

Now, with AmosConnect Online you can ensure that unwanted messages won't be sent to your ships. Not transmitting a message at all will save you 100%!

What is AmosConnect Online?

AmosConnect Online is a free web-based tool allowing you to manage your ships' mailboxes from your office or home. You do not have to download any special software and you can use it anywhere you can reach the Internet.

What can I manage?

The following options are currently available:

- **Black/white lists.** You can make "rules" to decide who can or can't send a message to your ships, and the maximum size. These rules can be either on a per mailbox, ship or fleet basis.
- **Redirect messages.** You can specify that some messages (based on size and/or originator) are copied or sent to your office email address instead of to the ship. You can decide whether the ship should receive them.
- **Mailbox Queue.** You can review the messages waiting for collection by the ships, and delete them if required. This is often useful if eg a ship has been in dry dock for a period of time.
- **Connection Log.** You can see a list of all of your ships and the last time they logged into AmosConnect.
- **Call/Message History.** Each ship's last 4 months calls are visible to you to view and you can also view the message details in these calls.
- **Force PDN, NDN.** Some email applications/systems cannot request Delivery Notifications. This feature allows you to force them on specific originating email addresses.
- **Message Expiry.** Sometimes ships cannot dial in every day. You can now set time limits on specified messages which will be deleted from the mail queue if not collected after a pre-defined time. Usefull eg for weather forecasts which may be updated every 6 hours or daily news.
- **Copy queued messages.** If there is a large message waiting in the ships' queue, you can make a copy of it to read and decide if the ship should collect it.

- **Cost Codes on shore to ship messages.**

On board ship, the Master can already assign a Cost Code for all ship to shore messages. Now, you can set one on Shore to Ship messages, based on originating email address. This will be displayed in TaB.

Is AmosConnect Online also available to AmosConnect Basic customers?

Yes. All of the above features are available to Basic customers. However there is one difference. Each AmosConnect Basic ship has it's own Online Account. Therefore each ship must be managed separately.

How do I get Access to this tool?

AmosConnect Basic users are given an account and password automatically for each ship upon activation. Users of the full version should contact their Xantic Sales office for an account which we will create and use for all your all ships.

Continuing development

We are constantly updating AmosConnect Online following feedback and requests from our customers. Our next release (expected August 2006) will also have the following: Full remote configuration of the Remotes mailboxed, addressbooks and API/Filscan settings
